

SYSTEMS AND METHODS FOR THE
AUTOMATIC REGISTRATION OF DEVICES

Abstract of the Disclosure

5 Systems and methods for providing
registration at a remote site that may include, for
example, a monitoring module that may communicate with
a remote site. A registration protocol may be used by
the monitoring module and the remote site in generating
10 the messages communicated during the registration
process. The monitoring module may gather and generate
various identification information to be included in
the registration protocol messages. The registration
information provided by the monitoring module may be
15 stored at the remote site in a database server having a
database. A confirmation message may be communicated
from the remote site to the monitoring module that may
either acknowledge successful registration or report
that an error occurred during the registration process.
